LMG eNewsletter - April 2013

The burden of disease and mortality levels for people living in fragile states is extraordinarily high, and six out of ten people who live under the poverty line live in a low- or middle-income fragile state.

There is great need in regard to healthcare in fragile states, creating compelling reasons for the international community to be engaged in strengthening these health systems. However, a durable exit from poverty and insecurity needs to be driven by each country's own leadership--in response to citizen's needs.

The long-term vision of the LMG project is to help build effective, legitimate, and resilient health systems and institutions that promote sustained health improvement and overall development.

This eNewsletter shows how inspired leadership, sound management, and transparent governance are key ingredients in the realization of this vision.

The Role of the LMG Project in Building Health Systems in Fragile States
